Thoughts on open-ended questions: people provided “real” answers, and for some, it seemed like that the questions were on topics that they wanted to discuss. The questions on belonging to me seemed to be produce more useful or thought-provoking answers that can shed light on that question of how immigration is affecting people psychologically. The participation question did get some good answers reflecting efficacy (worry about the community & wanting to do more or expressing hopelessness), but many were along the vein of “no, already have enough information” or “would like to seek that information on my own.”
